Central Door

Car door lock actuators are designed to lock and unlock a door without the effort of pulling on a cable and rod.. In some cars, the door lock actuator is positioned below the latch. A rod connects the actuator to the latch, and another rod connects the latch to the knob that sticks up out of the top of the door.

What the central locking does is open all the doors at the same time.

This is done by inserting the key into the lock barrel on one door, or using the remote control part of the key.

Sometimes a door's lock actuator might fail.

It is an electronic part that is fitted to each
