Fuel Flow Parametric Diagram Example

Fuel must be supplied to an engine in a manner determined by operating conditions. As engine load changes, changes in fuel flow are required to maintain correct fuel mixtures. The flow of the air is regulated by a throttling device as shown in Figure 16-5. The throttle device is controlled by an engine speed control device or by a "governor" ...

#1 requires fuel and its day tank-mounted fill pump begins to draw fuel from the common fuel supply manifold. Without any fuel flow controls, greater fuel flow may come from the nearest source tank, or that tank which provides the lowest resistance to fuel flow (see sketch below). Let's now imagine that day tank #1 goes

One line goes from the fuel tank to the primer bulb, from the primer bulb to the carburetor, and back to the fuel tank. Be careful to not put a fuel line too near a hot place on the engine. If the gas is overheated it will vapor lock and stop fuel flow. Be aware of anything that could rub or vibrate against a fuel line and cause a leak.
