If the third-party library is on the list of built-in libraries bundled with the App Engine Python runtime, you only have to specify it under the libraries directive in the app.yaml, for example: libraries: - name: PIL version: "1.1.7" - name: webob version: "1.1.1" App Engine automatically provides the requested libraries during deployment.

Using Python 2 libraries - Google Cloud

App Engine offers you a choice between two Python language environments. Both environments have the same code-centric developer workflow, scale quickly and efficiently to handle increasing demand, and enable you to use Google's proven serving technology to build your web, mobile and IoT applications quickly and with minimal operational overhead.

Python on Google App Engine | App Engine Documentation ...

A full-featured web application framework for Python. enum (None) "0.9.23" A backport of the enum module introduced in python 3.4: endpoints (None) "1.0" Libraries for building APIs in an App Engine application. flask (None) "0.12" Flask is a microframework for Python based on Werkzeug, Jinja 2 and good intentions. futures (None) "3.0.5"

Built-in Third-party Libraries - Google Cloud

Migrate the App Engine bundled services in your Python 2 app to Google Cloud services, third-party services, or other recommended replacements. Test your app after migrating each service. When you finish this step, your Python 2 app should no longer use any google.appengine APIs. Upgrade your app to be compatible with both Python 2 and Python 3.

Migrating to the Python 3 standard runtime - Google Cloud

No bundled App Engine services in the Python 3 runtime. Starting with the Python 3 runtime, the App Engine standard environment no longer includes bundled App Engine services such as Memcache and Task Queues. Instead, Google Cloud provides standalone products that are equivalent to most of the bundled services in the Python 2 runtime.

Differences between the Python 2 and Python 3 runtimes

Logging for App Engine apps is provided by Google Cloud's operations suite. See Google Cloud's operations suite Pricing for more information on logging costs and limits. For long-term storage of logs, you can export logs from Google Cloud's operations suite to Cloud Storage, BigQuery, and Pub/Sub.

Reading and Writing Application Logs - Google Cloud

This tutorial shows how to prepare your local machine for Python development, including developing Python apps that run on Google Cloud. If you already have a development environment set up, see Python and Google Cloud to get an overview of how to run Python apps on Google Cloud. Objectives. Install the latest version of Python.

Setting up a Python development environment | Google Cloud

Plus, App Engine automatically scales to support sudden traffic spikes without provisioning, patching, or monitoring. Below is a sample reference architecture for building a simple web app using App Engine and Google Cloud.

App Engine Application Platform | Google Cloud

To deploy your web app to App Engine, you need an app.yaml file. This configuration file defines your web app's settings for App Engine. Create and edit the app.yaml file in the root directory of your project: touch app.yaml

app.yaml runtime: python38 Note: With this simple web app, you just need to specify that you're using Python 3.8.
