Mathematical Modelling in Biology Lecture Notes

$s = (r - 1) = r$ is a stable steady state since $|f'(s)| = |f'(r)| = |2 - r| < 1$. In Figure 1.3 we plot this information on a diagram of steady states, as a function of r , with stable steady states indicated by

solid lines and unstable steady states
by dashed lines. When $r=1$ we have
 $(r-1)=r=0$, so both steady states are at
 u .

Mathematical Modelling in Biology Lecture Notes

1.1 What is mathematical modelling?

Read Free Lecture Notes On Mathematical Modelling

Models describe our beliefs about how the world functions. In mathematical modelling, we translate those beliefs into the language of mathematics. This has many advantages

1. Mathematics is a very precise language. This helps us to formulate ideas and identify underlying assumptions.
- 2.

Assume that the number of offspring produced per individual per unit time is a constant $b > 0$. Similarly assume that the death rate (number of deaths per unit time per individual) is a constant $d > 0$. $x(t + \Delta t) = x(t) + bx \Delta t - dx \Delta t$ Divide by Δt and take the limit as $\Delta t \rightarrow 0$. $\frac{dx}{dt} = (b$
