Age Problems - Sample Math Practice Problems The math problems below can be generated by MathScore.com, a math practice program for schools and individual families. ... Solution Maria = 12 Maria + John = 60 12 + John = 60 John = 60 - 12 = 48 # Problem Correct Answer Your Answer; 2: Mary is 11 years old. The sum of the ages of Mary and Tiffany ...
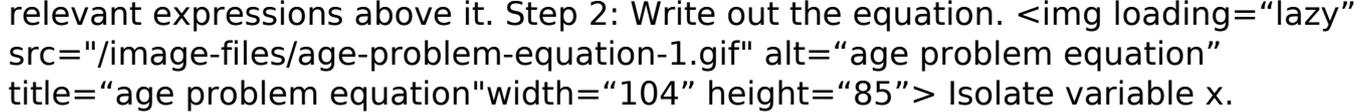

Math Practice Problems - Age Problems
Some solved examples on Algebra Age problems 1) The present age of Jacob's

father is three times that of Jacob. After 5 years, sum of their ages would be 70 years. Find their present ages. Solution : Let Jacob's age = x years His fathers's age = 3x years After 5 years Jacob's age = x + 5 Father's age = 3x + 5 Sum of their age = 70

algebra age problems - ask-math.com
Solution: Step 1: Let x be John's age now. Look at the question and put the relevant expressions above it. Step 2: Write out the equation. <img loading="lazy" src="/image-files/age-problem-equation-1.gif" alt="age problem equation" title="age problem equation"width="104" height="85"> Isolate variable x. Answer: John is now 18 years old.

Age Word Problems (video lessons, examples and solutions)
Answer: Suppose that the present age of the son is = x years. Then the father's age is (60 -x) years. Notice that we are trying to reduce the problem into as few variables as possible. As per the second condition of the question, we have: The age of the father six years ago = (60 – x) – 6 years = 54 – x years.

Equation Problems of Age: Concepts and Practice Questions
Problem 3 : The ages of Abraham and Adam are in the ratio 5 : 7. Four years from now, the ratio of their ages will be 3 : 4. Find the present ages of them. Solution : Given : The ages of Abraham and Adam are in the ratio . 5 : 7. Then, age of Abraham = 5x. age of Adam = 7x. Four years from now, age of Abraham = 5x + 4. age of Adam = 7x + 4

Word Problems on Ages with Solutions - onlinemath4all
Solution. a. Let x be the age of John now. His age 13 years ago was x- 13 and his age nine years hence is x + 9. x - 13 = (1 / 3) (x + 9) x - 13 = (1 / 3) x + 3 x - (1 / 3) x = 3 + 13 (2 / 3) x = 16 x = 24. Final Answer: Therefore, John's age is 24 years old.

Age and Mixture Problems and Solutions in Algebra ...
Solve this equation by simplifying it step by step: (after brackets opening at the right side) (after moving variable terms to the right and constant terms to the left) (after combining like terms) Thus you got that Ann's present age is years. Check. If Ann's present age is 5 years, then Betty is years old now.

Lesson Age problems and their solutions - Algebra
Solving Age Problems If the problem involves a single person, then it is similar to an Integer Problem. Read the problem carefully to determine the relationship between the numbers. See example involving a single person.

Age Word Problem Calculator

Age Word Problems Calculator - Math Celebrity
First, I'll need to name things and translate the English into math. Since my age was defined in terms of Will's, I'll start with a variable for Will's age. To make it easy for me to remember the meaning of the variable, I will pick W to stand for "Will's age at the start, in the year 2000". Then Will's age in 2009, being nine years

later, will be W + 9.

"Age" Word Problems | Purplemath
(Note that since Lisa is 16 years younger than Kathy, you must add 16 years to Lisa to denote Kathy's age.) Now, use the problem to set up an equation. Therefore, Lisa is 7 years old. Previous Number Problems. Next Motion Problems. Properties of Basic Mathematical Operations

Age Word Problems - MathHelp.com - Algebra Help - YouTube
Students should be able to break this down into a simple algebraic equation based on the order of the steps, representing Jake's age as a and Jan's age as 2a: a + 2a = 5a - 48. By parsing out information from the word problem, students are able to then simplify the equation in order to arrive at a solution.

Algebra Age-Related Word Problem Worksheets
Since Jack's age is expressed in relation to Diane's age (in this problem, Jack is two years older than Diane), so then our variable will be based on Diane's age. In other words, let d = Diane's age.
